

# NEW INNOVATION

## Introducing The V-Series Jockey Wheel

- Heavy Duty Folding Handle
- Improved Swivel Mechanism
- Vertical Swivel Pin
- High Load Galvanized Wheel

## V-Series Jockey Wheels are Stronger & Safer

Sideways load kills more jockey wheels than anything else! And nobody knows this better than trailer hire companies and users of heavy trailers, who suffer frequent jockey wheel breakages in this way.

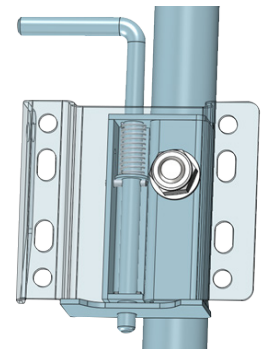

### Heavy-duty Handle & Screw

V-series jockey wheels all use a 20% heavier duty winding screw than in standard models. And atop that is a compact foldaway heavy duty handle with a 16mm shaft.

### Unique & Improved Swivel Mechanism

The Trailparts V-series swivel bracket has a two-point engagement mechanism that resists sideways load. Further improvements are the swivel pin – which remains static in the bracket during swiveling (no more caught fingers) – and the short distance between the two parts of the swivel bracket (no more bent pins).

### High Load Galvanized Wheel

A newly developed high-load galvanised wheel is also released on these. The 200 x 50mm virgin rubber tyre is designed so that it won't slip on the rim under heavy load or skid on stones on concrete; and makes your trailer easier to push on soft and uneven surfaces.

Code	Wheel Type	Rating	Ground to Swivel	Wind Adjust.
JZV8H	200 x 50mm Galvanized	350kg	365mm	270mm
